

Residential and Small Non-Residential Standard Offer Service

Consumer Information About Your Electricity Supply

April, 2026

Electricity suppliers in Maine must, by Maine law, provide fact sheets, or “uniform labels” from time to time to educate consumers about their electricity service. Your electricity is delivered by Central Maine Power Company, but the electricity itself is supplied by :

MAJOR ENERGY ELECTRIC SERVICES, LLC

The fact sheet provides consumer information about the power supply sources and air emissions of service providers.

Power Source

(January 1, 2025 - December 31, 2025)

This supplier provided electricity with the following resources:

	Supplier's Mix	New England Mix
Biomass	1.95%	1.95%
Municipal	0.49%	0.49%
Fossil Fuel Cogen	0.00%	0.00%
Fuel Cells	0.97%	0.97%
Geothermal	0.00%	0.00%
Hydro	5.12%	5.12%
Solar	8.42%	8.42%
Tidal	0.00%	0.00%
Wind	3.49%	3.49%
Nuclear	22.0%	22.0%
Gas	46.57%	46.57%
Oil	5.61%	5.61%
Coal	0.36%	0.36%
Other Sources	5.02%	5.02%
Total	100.0%	100.0%

Air Emissions

(January 1, 2025 - December 31, 2025)

This table compares the air emissions from the supplier's electricity mix to average emissions levels from all New England sources.

	Supplier's Mix (lbs/MWh)	
Carbon Dioxide (CO₂)	716.85	This is the same % as the New England Average
Nitrogen Oxide (NO_x)	0.5925	This is the same % as the New England Average
Sulfur Oxide (SO_x)	0.3308	This the same % as the New England Average

Notes: lbs/MWh = pounds per Megawatt-hour
1 Megawatt-hour = 1,000 kilowatt-hours

Additional Information and Required Notes:

Power Sources—Maine law requires retail electricity providers to periodically provide information to their customers on the mix of power sources used by the provider to serve their Maine customers' load.

Emissions—Carbon Dioxide (CO₂) is released when certain fuels are burned. It is considered a greenhouse gas and a major contributor to global warming. Nitrogen Oxides (NO_x) form when certain fuels are burned at high temperatures. They are considered contributors to acid rain and ground-level ozone (or smog). Sulfur Dioxide (SO₂) is formed when fuels containing sulfur are burned. Major health effects associated with SO₂ include asthma, respiratory illness and aggravation of existing cardiovascular disease. The production of electricity can produce other harmful emissions and have other environmental impacts. Environmental impacts differ among individual power plants.

If you have any questions or need further explanation, please call the Maine Public Utilities Commission, toll-free at 1-800-452-4699. Additional information can be found at <https://www.maine.gov/mpuc>
